

JULY 2026

INTERNSHIP REPORT

IILM UNIVERSITY

1M1B | AI FOR SUSTAINABILITY VIRTUAL
INTERNSHIP

STUDENT NAME: MUSKAN KUMARI

ENROLLMENT NUMBER: CS-23411504

PROGRAM & SEMESTER B.TECH , 7TH SEM

ORGANIZATION NAME: IBM SKILLSBUILD

IILM

UNIVERSITY

About the Organizers

1M1B Foundation

1 Million for 1 Billion is a global non-profit empowering youth to drive sustainable change. Through innovation and education, 1M1B connects emerging leaders with real-world solutions aligned to the UN Sustainable Development Goals (SDGs).

Mission: Mobilize 1 million changemakers to impact 1 billion lives.

IBM SkillsBuild

IBM SkillsBuild is a free digital learning platform offering industry-relevant tech education to students and job seekers worldwide. It provides hands-on AI, cloud, and data science training developed by IBM experts.

Mission: Bridge the global skills gap through accessible, future-ready technology education.

Internship Overview

Duration 6 Weeks

A structured, self-paced program spanning six weeks, designed to build AI and sustainability competencies progressively through guided learning modules and hands-on activities.

Format

100% Virtual & Unpaid
Fully remote and accessible from anywhere in the world. The unpaid structure ensures inclusivity, removing financial barriers for students and young professionals globally.

Focus

Learning-Centered
Emphasizes skill-building over deliverables. Participants gain practical AI knowledge aligned with real-world sustainability challenges, earning IBM SkillsBuild credentials upon completion.

Core Objectives

Align AI Tools with UN SDGs

Leverage cutting-edge artificial intelligence technologies to directly support and advance the United Nations Sustainable Development Goals, creating measurable impact across climate, energy, and environmental domains.

Develop Sustainability Solutions

Design and prototype AI-driven solutions that address real-world sustainability challenges, from carbon footprint reduction to resource optimization and climate resilience planning.

Build Future-Ready AI Skills

Equip participants with hands-on experience in IBM SkillsBuild tools, machine learning frameworks, and data analytics to drive meaningful environmental and social change.

Skills Gained

Technical AI Skills: Hands-on experience with IBM SkillsBuild AI tools and platforms. Proficiency in machine learning concepts, data analysis, and AI model fundamentals. Ability to apply natural language processing and predictive analytics to real-world sustainability challenges.

Sustainability Knowledge: Deep understanding of UN Sustainable Development Goals (SDGs) and climate action frameworks. Competency in mapping AI-driven solutions to environmental challenges such as carbon tracking, resource optimization, and green energy forecasting.

Participant Experience

What to Expect as an Intern:

- Hands-On AI Projects: Apply machine learning and data tools to real sustainability challenges across energy, water, and climate domains.
- Expert Mentorship: Receive guidance from IBM professionals and 1M1B sustainability leaders throughout the program.
- Real-World Applications: Develop solutions mapped to UN SDGs with tangible, portfolio-ready outcomes.
- Collaborative Learning: Engage with a global cohort of like-minded changemakers driving climate action through technology.
- IBM SkillsBuild Certification: Earn a recognized credential validating your AI and sustainability competencies.

Program Impact & Outcomes

Key Metrics & Achievements

- 10,000+ Participants Reached Globally
- 500+ Sustainability Projects Completed
- 12 UN SDGs Actively Addressed
- 80+ Countries Represented
- 95% Completion Rate
- 3,200+ AI Solutions Prototyped
- 40+ NGO & Industry Partners Engaged
- 78% of Graduates Report Career Impact

Key Results

AI Solutions Developed: Interns built and deployed AI-powered tools addressing real-world sustainability challenges — including carbon footprint trackers, smart resource allocation models, and climate risk prediction dashboards — using IBM SkillsBuild's cutting-edge machine learning frameworks and open datasets.

Sustainability Impact Created: Projects contributed measurable progress toward UN SDGs, with solutions targeting clean energy access, responsible consumption, and climate action. Interns demonstrated how AI can accelerate global sustainability goals while building scalable, replicable models for future cohorts.

Intern Success Story

"This internship completely transformed how I think about technology and its role in solving real-world problems."

— Priya Sharma, Cohort 3 Participant

- ◆ Gained hands-on experience applying IBM AI tools to climate data analysis
- ◆ Developed a sustainability dashboard tracking carbon emissions for a local NGO
- ◆ Earned IBM SkillsBuild certification in AI & Sustainability
- ◆ Secured a full-time role as a Climate Tech Analyst after completing the program

"The mentorship, global community, and real project experience gave me the confidence and skills to launch my career in sustainable technology."

The background features abstract geometric shapes in various shades of teal and light blue, primarily located in the corners and along the edges, creating a modern, architectural feel.
